

Hold On! These five Countries will change the world forever

EL4DEV, a geostrategic tool to save Europe and the World

Contrary to the European Union and all its institutions, the Europe of nations will not perish, and its peoples will not be replaced. Europe has the potential to reform itself by drawing on its spiritual roots, learning from its mistakes, undertaking differently by following the path of the heart, and opening an innovative path to the world that will lead to a new model of civilization.

Faced with current challenges, a counterbalance to the economic and financial power must rise to operate at the same organizational level — globally, not just nationally or regionally. This counterbalance must unify and synchronize actions across independent, interconnected, and ingeniously articulated blocs that will carry sufficient weight in global economic flows and exchanges. Time to act is running out, as all the mechanisms of control necessary for a global dictatorship — one that destroys traditional family structures, core values, nature, and spirituality — are now in place.

Paul Elvere DELSART, founder of the Think and Do Tank called LE PAPILLON SOURCE EL4DEV, proposes a solution that is still under the radar yet holds vast untapped potential.

This innovative and non-aligned solution combines social engineering with positive and natural geoengineering. It begins in a specific area of the world: the Mediterranean area.

In this region, rich in civilization, history, culture, and language, five European countries have been sacrificed by financial, economic, and political elites. Yet, these countries have the potential and must be reformed to save the European continent and, by extension, the nations of an expanded Mediterranean space through a process of emulation.

Creating a new diplomatic path is a necessity

It is time to profoundly reconfigure the system of international relations. Nations have long adapted to the effects of economic globalization, paying a high price for it. Now is the time for them to adjust to the effects of a new globalization, referred to as societal globalization.

It is time for the leaders of our nations to gradually evolve into positive guides and guardians of family and societal values as part of the foundation and sustainability of a new movement of thought and a new global civil society.

It is time to put an end to the voracious politico-military-economic associations that restrict the freedoms of nations and peoples in favor of new politico-societal associations. It is time to experiment locally and then show the world the path to follow.

Saving the Mediterranean area, starting with southern European countries

The multifunctional cities within the LE PAPILLON SOURCE Mediterranean societal consortium serve as tools for a massive educational process through individual and collective experimentation. Their role is to spark a new movement of thought that will lead to a generalized movement of co-creation and a major societal transformation throughout the Mediterranean region.

Paul Elvere DELSART's Mediterranean diplomatic action plan

- Launch positive initiatives and effective processes (experimental tourist cities and self-managed agro-climatic, educational, multifunctional, and interconnected complexes + transnational events for intellectual and artistic cooperation + distributed architecture information systems) to export and promote a new Mediterranean philosophical culture.
- Promote a new ethical development model whose success indicators are the societal progress of nations, intellectual advancement, and the degree of cross-border cooperation among Mediterranean peoples.
- Move away from traditional indicators like the geo-economic density of a country or region and instead focus on geo-societal density, geo-intellectual density, and geo-creative density.
- Enable the movement of various ambassadors of this new Mediterranean philosophy (heads of state with traditional values, spiritual philosophers, independent scientists, isolated inventors, artists, interdisciplinary students — all seeking global peace, prosperity, and dignity for humanity). This movement would not focus on economic aspects but rather societal, intellectual, and cultural dimensions.
- Make the Mediterranean space the prototype of societal, intellectual, and artistic markets for the world.
- Through the EL4DEV societal change process, create a new politico-societal Mediterranean union: the Mediterranean Societal Union, comprised of multiple national Societal Economic Interest Groups.
- Establish the Mediterranean region as a model of success, a showcase of a better humanity, an international beacon, and a space of positive influence for the rest of the world.
- Make the Mediterranean region the birthplace of a new Renaissance, with dynamics of openness, knowledge-sharing, resource-sharing, and massive co-creation. These dynamics, powered by the EL4DEV program, will spread rapidly across the planet.

This successful societal development and functioning model, along with the EL4DEV process, must be exported to other geo-economic, geo-cultural, or geographic areas. Subsequently, societal unions will be created by emulation: an African Societal Union, a European Societal Union, an American Societal Union, an Asian Societal Union, an Oceanian Societal Union, and a Pacific Societal Union.

Initiating the Second Renaissance Movement centered in the Mediterranean

The goal is to ignite a new Renaissance movement that challenges the mentalities, behaviors, and methods of our current era and those of the past. This movement will be driven by the pursuit of a new, balanced form of civilization that deeply respects the environment and living beings, addressing genuine human needs rather than superficial desires (such as material wealth, consumerism, economic wealth of municipalities, regions, and nations, or the pursuit of power and domination over others).

Characteristics of the Second Renaissance Movement initiated by the EL4DEV Program and its two sub-programs: LE PAPILLON SOURCE and THE MUNICIPALITIES COUNTER-ATTACK

- A Renaissance of Art: The movement will inspire a more positive, symbolic art form focused on beauty with an educational purpose.
- A Collective Reorientation: It will emphasize the subtlety of thought, the emancipation of a more spiritual and universally accessible science, the discovery and understanding of the systemic nature of the world and life as a whole, and the collective elaboration of large societal projects and monumental endeavors foundational to a new civilization.
- A Mediterranean Movement with Transcontinental Aspirations: Initially focused on the Mediterranean region, this movement will later expand transcontinentally. It aims to illuminate the creative spirit within each individual, supported by a new experimental form of education that acknowledges the innate potential of every person and emphasizes their pivotal role in their local and global environments.

Features of the Mediterranean Societal Union

The Mediterranean Societal Union will be fully decentralized and entirely transverse, as it will not be an intergovernmental organization but rather one uniting sovereign peoples under a shared goal of empowerment, sovereignty, a return to fundamental values, unity, peace, and prosperity.

- Core Objectives:
 - Restore and enrich soils and ecosystems.
 - Develop highly participative, experimental education accessible to all without conditions.
 - Enhance dignity, autonomy, and sovereignty of peoples.
 - Achieve sustainable stabilization in the Mediterranean region.
 - Promote integration through multilateral cooperation, dialogue, and unrestricted sharing.
 - Implement major societal projects and initiatives with tangible impacts on the well-being and happiness of Mediterranean populations.
 - Foster wealth of the heart, intellect, and spirit rather than economic or financial wealth.
- Project Identification and Support: The Mediterranean Societal Union will identify and support major and minor societal projects led by Mediterranean peoples. These projects, characterized by high value, regional and interregional interest, and distributed architectures, will all be interconnected through the EL4DEV process.

Founding the new Mediterranean Civil Society: The Mediterranean Social Contract

A new type of regulation is required. Is international regulation possible without an international state? Yes. Such regulation would rely on a novel kind of social contract with a unique value system. This contract, along with its system of values, would be rooted in a shared conception of values and reason imprinted in human consciousness. It would be based on individual consent, binding those who accept it.

- **A Participatory Localized Process:** A civil society grounded in a territorial framework would be a participatory process through which individuals reach agreements among themselves and with economic and political authorities (including institutions and businesses). It would represent a self-organizing activity aimed at progressive human and social values.
- **Key Features of the Ideal Civil Society:** Autonomy and self-organization, coupled with communication and transparency — two major components of a balanced cybernetic system. In such a society, the state would slightly retreat from its traditional roles, creating islands of civic engagement that work symbiotically with the state. In these locally driven dynamics of progress, the people and their leaders act and evolve in harmony toward shared goals.
- **Building Ethical Communities:** The goal is to form communities based on ethics — encompassing morality, exchange, and respect. Every society in the world, whether Western or non-Western, from the Global North or South, has the potential to experiment with such a system.

Why is this possible?

It is possible simply because all cultures possess traditions of human dignity, tolerance, reason, and public deliberation.

Convincing states and peoples to adopt an alternative multilateral framework

How can a global civil society persuade states and their peoples to adopt a multilateral framework to address critical issues? There is no alternative but to establish a global set of rules based on ethics.

- **The Key to Success: Local Experimentation:** The only way to achieve mass consent is to focus on localized experimentation in real-time by actors within each territory worldwide. These experiences must then be widely shared using a powerful distributed information system, such as blockchain technology.

But what should we actually experiment with?

The goal is simply to experiment with the tangible benefits that these ethical rules could bring to territories. This involves gaining insights from local samples of more balanced, sustainable, and equitable socio-political, economic, and behavioral models, as well as experimenting with spirituality at the core of local economies and governance. This would inevitably foster collective action within societies by unveiling an ever-growing number of positive change-makers. Ultimately, it would enable a transformative education powerful enough to propagate these positive movements of thought and co-creation beyond the borders of the territories involved.

The foundation of a social contract through EL4DEV's progress dynamics

The territorial dynamics initiated by the EL4DEV program are unique because they take into account the specific socio-economic and cultural characteristics of each region. These dynamics begin as highly participatory, experience-based projects and quickly become viral through the use of information technologies.

The numerous territorial civic implications (referred to as singular territorial dynamics) are interconnected like pieces of a giant puzzle through an ingenious application mechanism powered by a powerful catalyst: EL4DEV's "Big Smart Data." Together, they will form a modular, highly scalable, and adaptable structure. From this, a true global civil society will emerge in prototype form—arising in ways no one anticipated.

The rules for exchange and global governance would ultimately be defined in a highly participatory manner within the social contract, based on mass consent. Only through this consent can the much-envisioned global civil society—often dismissed as utopian—be realized. In essence, the social contract will emerge solely through the continually growing civic involvement of actors in territories across the globe. The connection between territories will be built upon similarities in their civic initiatives. These shared experiences across peoples will form the foundation of the social contract. The result will be greater than the sum of its parts—a key principle of cybernetics, the science of self-regulating complex systems.

The Social Contract: voluntary, not imposed

The social contract will never be imposed on individuals, nor will its values. It will exist because of the deep and shared desire of a diverse international population seeking to evolve toward a sustainable and far more respectful way of life for living beings and the environment. It will be born from the participatory conceptualization of all global actors. It will emphasize positive interdependence and spirituality. Over time, civil society will evolve from its basic form to increasingly sophisticated versions while retaining its foundational principles.

The drivers of this positive evolution are the pursuit of truth, learning through experience, individual and collective reflection, intellectual subtlety, and emotional intelligence.

LE PAPILLON SOURCE Infrastructures: The Keys to the EL4DEV Program

The processes developed and employed are systematically innovative or strive to rewrite traditional processes by adding new components. They rely on mass cooperation dynamics made possible through the continuous interactions of countless actors that extend far beyond the immediate scope of the projects.

The EL4DEV program utilizes LE PAPILLON SOURCE agroclimatic cities and complexes as tools to provide mass education for actors in their host territories and beyond, thanks to transnational synergies. These cities and complexes include the renowned vegetated vertical structures with radionics functionality, meaning they emit powerful electromagnetic fields that benefit living beings, promoting the proliferation of life in the areas where they are implemented.

Ultimately, these experimental infrastructures—whether tourism-oriented or designed for agricultural and environmental purposes—function like franchises. Their models can be easily replicated in other parts of the world, particularly in regions with similar environmental and climatic conditions. Their implementation and management are strictly governed by rules that ensure numerous quality and transparency criteria are met, regardless of the socio-cultural environment.

Indicators for Measuring the Achievement of Objectives in countries joining the EL4DEV Societal Change Process

The achievement of objectives will be made possible through the powerful information system of the EL4DEV program, also called EL4DEV "Big Smart Data."

Key indicators include:

- **Quantification and Spatial Representation:** Tracking the progress dynamics driven by socio-economic actors in the environment.
- **Quantification of Involved Actors:** Ensuring transparency of their roles throughout various stages, along with analyzing their reactions and behavioral evolution, whether directly involved in the process or not. The project serves as both a means and an evolving environment for delivering highly interactive learning.
- **Data Modeling:** Capturing interactions and synergies created, real-time added value, and the satisfaction experienced by co-creators in their roles (static and dynamic mapping, representative charts, and diagrams).
