EL4DEV program's positive social engineering

« Changing the world requires methodology, rigor and determination – It requires a process »

Our societies are in reality social constructions (notion of "social constructivism"). This means that social reality and social phenomena are constructed, that is, created, objectified or institutionalized and, subsequently, transformed into traditions. Their existence depends only on a tacit agreement between people. Any redefinition or improvement of an existing social construction (regardless of its anchoring in mentalities) is easily achievable provided that adequate processes are designed, tested on a small scale, implemented on a large scale and continuously evaluated and maintained in their performance. The goal to be achieved is the self-regulation of a complex global system.

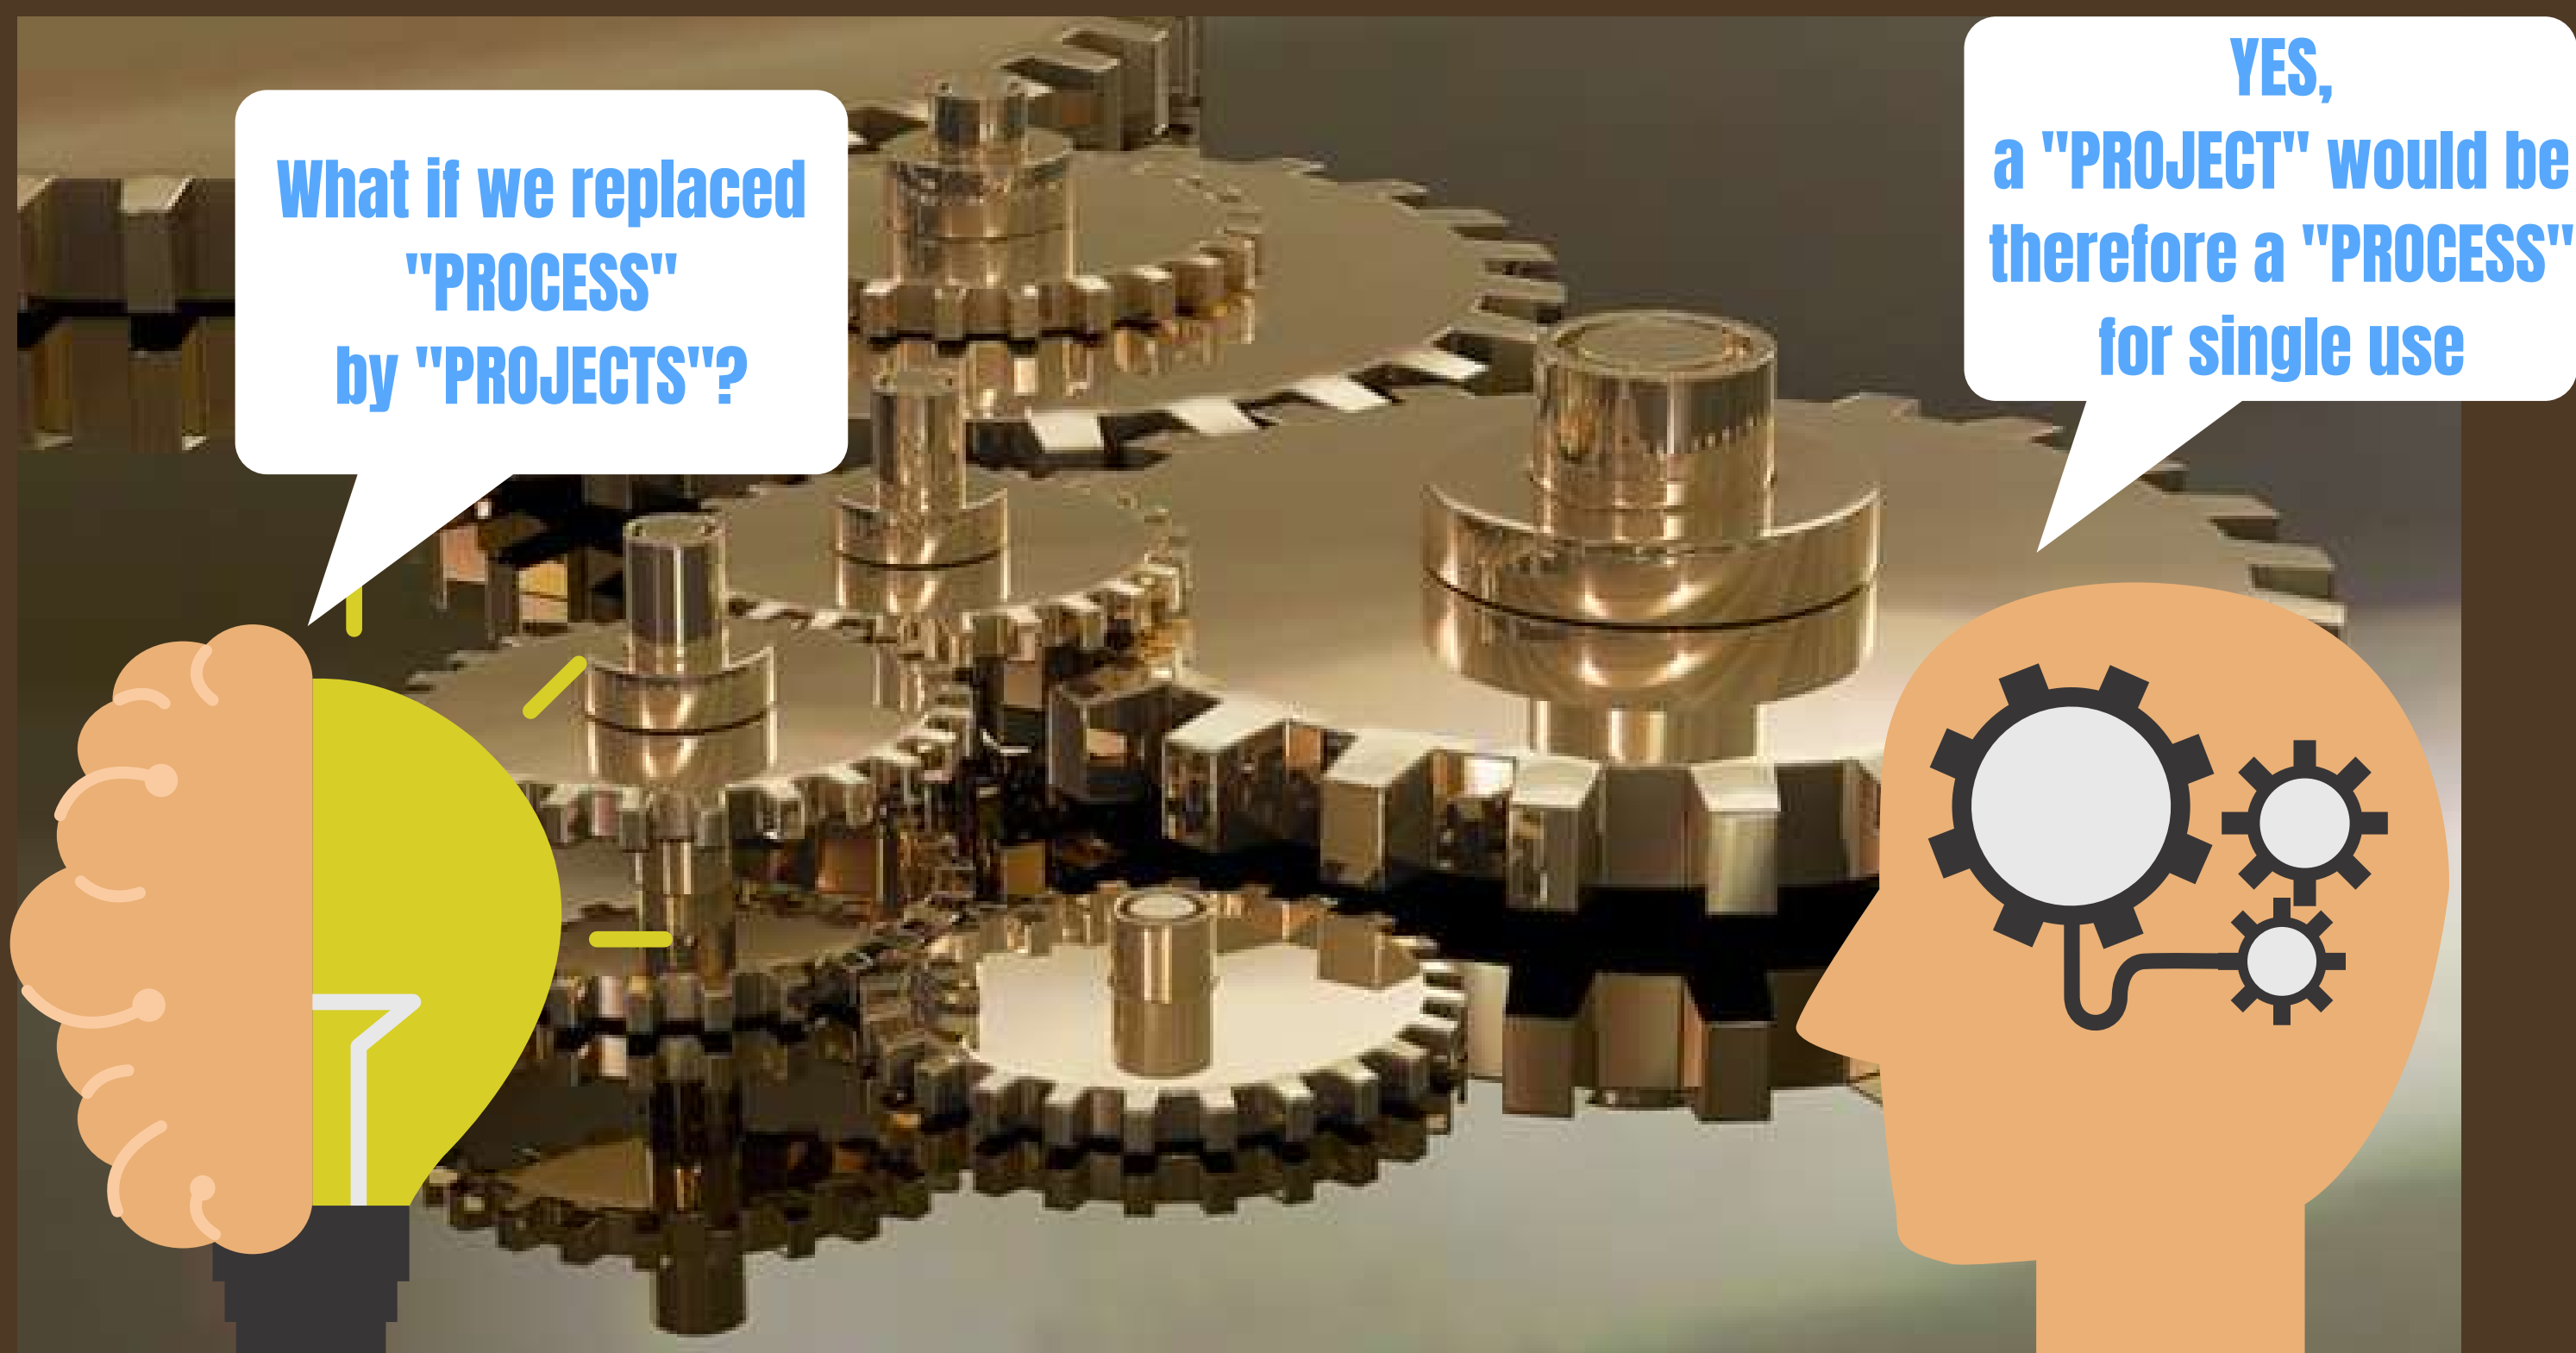

Processes are the key to "SOCIAL CONSTRUCTIVISM"

TIME FOR SOMETHING NEW !

EL4DEV program's positive social engineering

A change in mass is therefore easily operable thanks to a series of ordered, interdependent and single-use processes, the respective effects of which are highly channeled, optimized and combined in order to constitute a high-performance modular unit (global system whose balance is based on feedback or feedback from the condition). The whole is greater than the sum of the parts that compose it (cybernetics principles).

What if we replaced "PROCESS" by "PROJECTS"?

YES, a "PROJECT" would be therefore a "PROCESS" for single use

« *Change is therefore not a series of random events. Change is easily achieved through systems engineering applied to social and economic sciences; through social engineering* »

EL4DEV program's positive social engineering

« Social engineering or the art of managing society (referring to political and social sciences and <u>not to hacking</u>) is a very real science and is nowadays heavily used to guide society along a path. »

Social engineering is a discipline of the social sciences that refers to efforts to influence particular social attitudes and behaviors on a large scale, whether by governments, the media or private groups in order to produce the desired characteristics in a target population. Social engineers use the scientific method to analyze and understand social systems in order to design the appropriate methods to achieve desired results in subjects of human societies (Wikipedia reference).

Were you aware of this ?

This discipline is never mediated Why?

EL4Dev

EL4DEV program's positive social engineering

« I, for my part, have developed a unique program – the transnational and trans-disciplinary educational program called EL4DEV. »

EL4DEV can be defined as a positive social engineering mechanism.
EL4DEV is first of all an idea, a vision, a concept, a principle. It is then a question of a philosophical and cultural movement, of a social project. Finally, it can be defined as a process, an enforcement mechanism, a matrix, a self-regulatory framework of civil society, a new kind of social contract.

« My entire online publications make up my manifesto ... They aim to inspire, instill, motivate, activate... »

The solution :
interdependent,
interconnected
"Projects"
in unified blocks

Each project and city
represents
a unique piece of a
complex modular set

As for
"LE PAPILLON SOURCE"
interdependent,
interconnected
Autonomous cities

THE NEED

The incompleteness and lack of effectiveness of institutions international organizations urgently require responses to be found in the form of collective actions carried out by the entire international community.

EL4Dev

My job is to carry out multidisciplinary systems engineering applied to technology, environment, society, diplomacy and geopolitics so that the different peoples of the world gradually gain in wisdom, in mutual understanding, in autonomy, in sovereignty and in dignity and then finally activate in a collaborative way in the co-construction of a better world.
