

# Green Empire of the East and the West: How to achieve our goal

To achieve our goal, we need to use the strategy of network-centric warfare

## Web Communication and Authority Strategy

- Netlinking (information present on numerous websites, blogs, social networks, online newspapers - in text, image formats like infographics, concept art, illustrations, and video, including narratives, animations, and influence).
- Targeted mass mailing (sending several million emails to actors who may be directly or indirectly interested or affected by our initiatives).
- Network-centric approach (coordinating multiple entrepreneurial actors, moral entities, application tools, and economic models in several countries - all interlinked).
- Multilingualism (automatically communicating in all possible languages).

## Key Principles to Use

- Distributed architecture (numerous communication channels interconnected by numerous web links).
- Several interrelated and interdependent projects.
- Several project leaders/actors who are interdependent and interconnected.
- Several interrelated and interconnected IT tools (web platforms).

## In summary

- A strategy for all projects aligned in the same direction (a common global goal: changing the destiny of humanity).
- A consortium of innovative projects (initiated by several actors) brought together in a kind of planetary confederation.
- A modular economic model (a complex mechanism) for common fundraising.

## Financing strategy for all initiatives

- Several satellite projects (self-financing sources).
- A common international publishing house (for communication and networking of the works of our key actors/project leaders) (a source of self-financing for our key actors/project leaders).
- A single massive crowdfunding effort (global) - only possible through the adoption of a single communication and authority strategy on the internet.
- Support from certain non-aligned states (Let's count on Asia initially). These nations will see an interest in our initiatives. However, the projects do not belong to any country.

## Security of initiatives

- Networking inherently protects our respective initiatives. The authority gained on the internet ensures the visibility of each respective action because one project automatically leads to others.
- To compete with a project, one would have to compete with the mass of projects integrated into the global mechanism.
